The proportion of IgM and/or IgG responses may vary over time, and our study did not allow us to follow the time course or determine the persistence of antibody response. We speculate, however, that anamnestic responses may be more common in *P. alecto* in response to natural antigenic challenges than in humans in response to vaccination. ****Competing interests**** The authors declare that they have no competing interests. ****Authors' contributions**** DF devised and conceived the study, carried out the analyses, and drafted the manuscript.
