You can edit your photos in the usual ways. You can add text, shapes and objects to create pieces that you can print or send immediately to other people. Using filters to edit or enhance small objects is also very quick and simple. I use Photoshop every day--to design web graphics and logos, to retouch my images of my children, and to create images that I'll post to my blog. I should say that for all my uses of Photoshop, I've never needed to create an icon. Photoshop is really amazing and represents the most product of professional software in the world. Adobe makes this product right in your hand, needs no more discs, and is much cheaper than Photoshop light. The USB interface and a lack of proprietary formats make it even easier to operate the software, which almost has its own Indexing and search functions. Above all, its soft posing of the hand in city streets, on streets, in houses, on strange streets in the city, and their eyes moving left and right, eyes and noses, is a miracle of clarity and realism.
