In Lightroom 4, when you edit a raw image and immediately open it in a non-raw app, not only does Lightroom warn you that you'll lose the edits, it'll also automatically strip the color profiles. In Lightroom CC you get a smarter way to handle raw and non-raw edits. If you've made any changes to the color (which will be disassociated in the non-raw app), you'll find yourself where you left off instead of what you left behind. The lens's optical formula combines large maximum apertures (f/2.8-4.5) and an incredibly fast (1.22) maximum aperture of f/11 to help reduce the need to enlarge images in Photoshop. More importantly, the lens incorporates three aspherical elements—two of which are fluorite (for extra refraction) and two borofloat (to reduce aberration)—to help deliver better overall quality as well as greater compatibility with other lenses. Sony also offers the RX10 II with the older X-Mount, which makes it the first mirrorless camera with an S-mount interchangeable lens system. At the time of writing, the RX10 II was still available with this older lens mount, so I borrowed an older E-Mount model and began a series of tests around my city. With serious street and sports camera needs in mind, the RX10 II fills a very specific market niche and offers good value for its modest price point. System requirements:
